

Exercise 20A

Q11

Answer :

(i) Diagonal of the square = 72 cm

$$\begin{aligned}\therefore \text{Area of the square} &= \left[\frac{1}{2} \times (\text{Diagonal})^2 \right] \text{ sq. unit} \\ &= \left[\frac{1}{2} \times (72)^2 \right] \text{ cm}^2 \\ &= 2592 \text{ cm}^2\end{aligned}$$

(ii) Diagonal of the square = 2.4 m

$$\begin{aligned}\therefore \text{Area of the square} &= \left[\frac{1}{2} \times (\text{Diagonal})^2 \right] \text{ sq. unit} \\ &= \left[\frac{1}{2} \times (2.4)^2 \right] \text{ m}^2 \\ &= 2.88 \text{ m}^2\end{aligned}$$

Q12

Answer :

We know:

$$\text{Area of a square} = \left\{ \frac{1}{2} \times (\text{Diagonal})^2 \right\} \text{ sq. units}$$

$$\begin{aligned}\text{Diagonal of the square} &= \sqrt{2 \times \text{Area of square}} \text{ units} \\ &= (\sqrt{2 \times 16200}) \text{ m} = 180 \text{ m}\end{aligned}$$

\therefore Length of the diagonal of the square = 180 m

Q13

Answer :

$$\text{Area of the square} = \left\{ \frac{1}{2} \times (\text{Diagonal})^2 \right\} \text{ sq. units}$$

Given:

$$\text{Area of the square field} = \frac{1}{2} \text{ hectare}$$

$$= \left(\frac{1}{2} \times 10000 \right) \text{ m}^2 = 5000 \text{ m}^2 \quad [\text{since } 1 \text{ hectare} = 10000 \text{ m}^2]$$

$$\text{Diagonal of the square} = \sqrt{2 \times \text{Area of the square}}$$

$$= (\sqrt{2 \times 5000}) \text{ m} = 100 \text{ m}$$

\therefore Length of the diagonal of the square field = 100 m

Q14

Answer :

$$\text{Area of the square plot} = 6084 \text{ m}^2$$

$$\begin{aligned} \text{Side of the square plot} &= (\sqrt{\text{Area}}) \\ &= (\sqrt{6084}) \text{ m} \\ &= (\sqrt{78 \times 78}) \text{ m} = 78 \text{ m} \end{aligned}$$

$$\therefore \text{Perimeter of the square plot} = 4 \times \text{side} = (4 \times 78) \text{ m} = 312 \text{ m}$$

312 m wire is needed to go along the boundary of the square plot once.

Required length of the wire that can go four times along the boundary = $4 \times \text{Perimeter of the square plot}$

$$= (4 \times 312) \text{ m} = 1248 \text{ m}$$

Q15

Answer :

$$\text{Side of the square} = 10 \text{ cm}$$

$$\text{Length of the wire} = \text{Perimeter of the square} = 4 \times \text{Side} = 4 \times 10 \text{ cm} = 40 \text{ cm}$$

$$\text{Length of the rectangle } (l) = 12 \text{ cm}$$

Let b be the breadth of the rectangle.

Perimeter of the rectangle = Perimeter of the square

$$\Rightarrow 2(l + b) = 40$$

$$\Rightarrow 2(12 + b) = 40$$

$$\Rightarrow 24 + 2b = 40$$

$$\Rightarrow 2b = 40 - 24 = 16$$

$$\Rightarrow b = \left(\frac{16}{2} \right) \text{ cm} = 8 \text{ cm}$$

$$\therefore \text{Breadth of the rectangle} = 8 \text{ cm}$$

$$\text{Now, Area of the square} = (\text{Side})^2 = (10 \text{ cm} \times 10 \text{ cm}) = 100 \text{ cm}^2$$

$$\text{Area of the rectangle} = l \times b = (12 \text{ cm} \times 8 \text{ cm}) = 96 \text{ cm}^2$$

Hence, the square encloses more area.

It encloses 4 cm^2 more area.

Q16

Answer :

Given:

$$\text{Length} = 50 \text{ m}$$

$$\text{Breadth} = 40 \text{ m}$$

$$\text{Height} = 10 \text{ m}$$

$$\text{Area of the four walls} = \{2h(l + b)\} \text{ sq. unit}$$

$$= \{2 \times 10 \times (50 + 40)\} \text{ m}^2$$

$$= \{20 \times 90\} \text{ m}^2 = 1800 \text{ m}^2$$

$$\text{Area of the ceiling} = l \times b = (50 \text{ m} \times 40 \text{ m}) = 2000 \text{ m}^2$$

$$\therefore \text{Total area to be white washed} = (1800 + 2000) \text{ m}^2 = 3800 \text{ m}^2$$

$$\text{Rate of white washing} = \text{Rs } 20/\text{sq. metre}$$

$$\therefore \text{Total cost of white washing} = \text{Rs } (3800 \times 20) = \text{Rs } 76000$$

Q17

Answer :

Let the length of the room be l m.

Given:

Breadth of the room = 10 m

Height of the room = 4 m

$$\begin{aligned}\text{Area of the four walls} &= [2(l + b)h] \text{ sq units.} \\ &= 168 \text{ m}^2\end{aligned}$$

$$\therefore 168 = [2(l + 10) \times 4]$$

$$\Rightarrow 168 = [8l + 80]$$

$$\Rightarrow 168 - 80 = 8l$$

$$\Rightarrow 88 = 8l$$

$$\Rightarrow l = \left(\frac{88}{8}\right) \text{ m} = 11 \text{ m}$$

$$\therefore \text{Length of the room} = 11 \text{ m}$$

Q18

Answer :

Given:

Length of the room = 7.5 m

Breadth of the room = 3.5 m

$$\begin{aligned}\text{Area of the four walls} &= [2(l + b)h] \text{ sq. units.} \\ &= 77 \text{ m}^2\end{aligned}$$

$$\therefore 77 = [2(7.5 + 3.5)h]$$

$$\Rightarrow 77 = [(2 \times 11)h]$$

$$\Rightarrow 77 = 22h$$

$$\Rightarrow h = \left(\frac{77}{22}\right) \text{ m} = \left(\frac{7}{2}\right) \text{ m} = 3.5 \text{ m}$$

$$\therefore \text{Height of the room} = 3.5 \text{ m}$$

Q19

Answer :

Let the breadth of the room be x m.

Length of the room = $2x$ m

Area of the four walls = $\{2(l + b) \times h\}$ sq. units

$$120 \text{ m}^2 = \{2(2x + x) \times 4\} \text{ m}^2$$

$$\Rightarrow 120 = \{8 \times 3x\}$$

$$\Rightarrow 120 = 24x$$

$$\Rightarrow x = \left(\frac{120}{24}\right) = 5$$

$$\therefore \text{Length of the room} = 2x = (2 \times 5) \text{ m} = 10 \text{ m}$$

$$\text{Breadth of the room} = x = 5 \text{ m}$$

$$\therefore \text{Area of the floor} = l \times b = (10 \text{ m} \times 5 \text{ m}) = 50 \text{ m}^2$$

Q20

Answer :

Length = 8.5 m

Breadth = 6.5 m

Height = 3.4 m

Area of the four walls = $\{2(l + b) \times h\}$ sq. units

$$= \{2(8.5 + 6.5) \times 3.4\} \text{ m}^2 = \{30 \times 3.4\} \text{ m}^2 = 102 \text{ m}^2$$

$$\text{Area of one door} = (1.5 \times 1) \text{ m}^2 = 1.5 \text{ m}^2$$

$$\therefore \text{Area of two doors} = (2 \times 1.5) \text{ m}^2 = 3 \text{ m}^2$$

$$\text{Area of one window} = (2 \times 1) \text{ m}^2 = 2 \text{ m}^2$$

$$\therefore \text{Area of two windows} = (2 \times 2) \text{ m}^2 = 4 \text{ m}^2$$

$$\begin{aligned} \text{Total area of two doors and two windows} &= (3 + 4) \text{ m}^2 \\ &= 7 \text{ m}^2 \end{aligned}$$

$$\text{Area to be painted} = (102 - 7) \text{ m}^2 = 95 \text{ m}^2$$

$$\text{Rate of painting} = \text{Rs } 160 \text{ per m}^2$$

$$\text{Total cost of painting} = \text{Rs } (95 \times 160) = \text{Rs } 15200$$

***** END *****
