

Properties of Triangles Ex 15.2 Q4

Answer :

If the angles of a triangle are in ratio $1 : 2 : 3$, then let us take the first angle to be x .

Which means that the second angle will be $2x$ and the third angle will be $3x$.

Sum of all the three angles of a triangle $= 180^\circ$

$$\therefore x + 2x + 3x = 180^\circ$$

$$\Rightarrow 6x = 180^\circ$$

$$\Rightarrow x = \frac{180^\circ}{6}$$

$$\Rightarrow x = 30^\circ$$

$$\Rightarrow 2x = 2 \times 30^\circ = 60^\circ$$

$$\Rightarrow 3x = 3 \times 30^\circ = 90^\circ$$

Therefore, the first angle is equal to 30° , the second angle is equal to 60° , and the third angle is equal to 90° .

Properties of Triangles Ex 15.2 Q5

Answer :

Sum of all the three angles of a triangle $= 180^\circ$

$$\Rightarrow (x - 40)^\circ + (x - 20)^\circ + \left(\frac{x}{2} - 10\right)^\circ = 180^\circ$$

$$\Rightarrow x + x + \frac{x}{2} - 40^\circ - 20^\circ - 10^\circ = 180^\circ$$

$$\Rightarrow x + x + \frac{x}{2} - 70^\circ = 180^\circ$$

$$\Rightarrow \frac{5x}{2} = 180^\circ + 70^\circ$$

$$\Rightarrow \frac{5x}{2} = 250^\circ$$

$$\Rightarrow x = \frac{2}{5} \times 250^\circ$$

$$\Rightarrow x = 100^\circ$$

Hence, we can conclude that x is equal to 100° .

Properties of Triangles Ex 15.2 Q6

Answer :

Let the first angle of the triangle be x .

Therefore, we can say that the second angle of the triangle will be $(x + 10^\circ)$

and the third angle of the triangle will be $(x + 10^\circ + 10^\circ)$.

We know that the sum of all the three angles of a triangle is equal to 180° .

$$\therefore x + (x + 10^\circ) + (x + 10^\circ + 10^\circ) = 180^\circ$$

$$\Rightarrow x + x + x + 10^\circ + 10^\circ + 10^\circ = 180^\circ$$

$$\Rightarrow 3x + 30^\circ = 180^\circ$$

$$\Rightarrow 3x = 180^\circ - 30^\circ$$

$$\Rightarrow 3x = 150^\circ$$

$$\Rightarrow x = \frac{150^\circ}{3}$$

$$\Rightarrow x = 50^\circ$$

$$\text{Now, } (x + 10^\circ) = 50^\circ + 10^\circ$$

$$\Rightarrow (x + 10^\circ) = 60^\circ$$

$$\text{And, } (x + 10^\circ + 10^\circ) = 50^\circ + 10^\circ + 10^\circ$$

$$\Rightarrow (x + 10^\circ + 10^\circ) = 70^\circ$$

Hence, we can say that the three angles of the triangle are 50° , 60° and 70° .

***** END *****
