Q1.

Formula for a lens connecting image distance (v), object distance (u) and the focal length (f) is:

$$\frac{1}{v} - \frac{1}{u} = \frac{1}{f}$$

This is the lens formula.

The lens formula has a minus sign (-) between  $1/v$  and  $1/u$  whereas the mirror formula has a plus sign (+) between  $1/v$  and  $1/u$ .

Mirror formula:

$$\frac{1}{v} + \frac{1}{u} = \frac{1}{f}$$

Q2.

Magnification (m) formula for a lens is:

$$m = \frac{v(\text{distance of image})}{u(\text{distance of object})}$$

Magnification formula for a mirror has a minus sign (-) but the magnification formula for a lens has no minus sign.

Magnification formula for a mirror is:

$$m = - \frac{v(\text{distance of image})}{u(\text{distance of object})}$$

Q3.

The image will be virtual and erect, since the magnification has positive value.

Q4.

The image will be real and inverted, since the magnification has negative value.

Q5.

$$u = -10 \text{ cm}, f = 10 \text{ cm}$$

We have

$$\frac{1}{v} - \frac{1}{u} = \frac{1}{f}$$

$$\frac{1}{v} - \frac{1}{-10} = \frac{1}{10}$$

$$\frac{1}{v} = 0$$

$$v = \frac{1}{0} = \infty$$

At infinity

$$m = \frac{v}{u} = 1$$

$$\frac{2}{u} = \frac{1}{12}$$
