

### Exercise 19B

Question 10:

$$\text{Volume of sphere (when } r = 1 \text{ cm)} = \frac{4}{3} \pi r^3 = \left( \frac{4}{3} \times 1 \times 1 \times 1 \right) \pi \text{ cm}^3$$

$$\text{Volume of sphere (when } r = 8 \text{ cm)} = \frac{4}{3} \pi r^3 = \left( \frac{4}{3} \times 8 \times 8 \times 8 \right) \pi \text{ cm}^3$$

Let the number of balls =  $n$

$$n \times \left( \frac{4}{3} \times 1 \times 1 \times 1 \right) \pi = \left( \frac{4}{3} \times 8 \times 8 \times 8 \right) \pi$$

$$n = \frac{4 \times 8 \times 8 \times 8 \times 3}{3 \times 4} = 512$$

Question 11:

$$\text{Radius of marbles} = \frac{\text{Diameter}}{2} = \left( \frac{1.4}{2} \right) \text{ cm}$$

$$\begin{aligned} \text{Volume of marbles} &= \frac{4}{3} \pi r^3 \\ &= \left[ \frac{4}{3} \times \pi \times \left( \frac{1.4}{2} \right) \times \left( \frac{1.4}{2} \right) \times \left( \frac{1.4}{2} \right) \right] \text{ cm}^3 \end{aligned}$$

$$\text{Radius of beaker} = \left( \frac{7}{2} \right) \text{ cm}$$

Volume of rising water in beaker

$$= \pi r^2 h = \left( \pi \times \left( \frac{7}{2} \right)^2 \times \left( \frac{56}{10} \right) \right) \text{ cm}^3$$

Let the number of marbles be  $n$

$\therefore n \times \text{volume of marble} = \text{volume of rising water in beaker}$

$$n \times \left( \frac{4}{3} \pi \times \frac{1.4}{2} \times \frac{1.4}{2} \times \frac{1.4}{2} \right) = \pi \times \frac{7}{2} \times \frac{7}{2} \times \frac{56}{10}$$

$$n = 150$$

Hence the number of marbles is 150

Question 12:

Radius of sphere = 3 cm

$$\text{Volume of sphere} = \left( \frac{4}{3} \times \pi \times 3 \times 3 \times 3 \right) \text{cm}^3 = 36\pi \text{ cm}^3$$

$$\text{Radius of small sphere} = \frac{0.6}{2} \text{ cm} = 0.3 \text{ cm}$$

$$\begin{aligned} \text{Volume of small sphere} &= \left( \frac{4}{3} \times \pi \times 0.3 \times 0.3 \times 0.3 \right) \text{cm}^3 \\ &= \left( \frac{4}{3} \times \pi \times \frac{3}{10} \times \frac{3}{10} \times \frac{3}{10} \right) \text{cm}^3 \\ &= \left( \frac{4\pi}{3} \times \frac{3}{10} \times \frac{3}{10} \times \frac{3}{10} \right) \text{cm}^3 \end{aligned}$$

Let number of small balls be n

$$n \times \left( \frac{4\pi}{3} \times \frac{3}{10} \times \frac{3}{10} \times \frac{3}{10} \right) = \frac{4}{3} \pi \times 3 \times 3 \times 3$$
$$n = 1000$$

Hence, the number of small balls = 1000.
