

Sets Ex 1.4 Q4(i)

The given statement is 'True'.

If  $m \in \mathbb{Z}$ , then  $m$  can be written as  $\frac{m}{1}$ , which is of the form  $\frac{p}{q}$ ,  
where  $p$  and  $q$  are relatively prime integers and  $q \neq 0$ .

This implies that  $m \in \mathbb{Q}$ , the set of rational numbers.

Thus,  $m \in \mathbb{Z} \Rightarrow m \in \mathbb{Q}$

Hence  $\mathbb{Z} \subseteq \mathbb{Q}$

Sets Ex 1.4 Q4(ii)

The given statement is 'True'.

$\therefore$  Crows are also Birds.

Sets Ex 1.4 Q4(iii)

The given statement is 'False'.

$\therefore$  A rectangle need not be a square.

Sets Ex 1.4 Q4(iv)

The given statement is 'True'.

If  $z$  is a complex number, then it can be written as  $z = x + iy$ ,  
where  $x$  and  $y$  are real numbers and are called the real and imaginary  
parts of the complex number  $z$ .

If  $x$  is a real number, then  
 $x = x + i \cdot 0 \in \mathbb{C}$ ,  
where  $\mathbb{C}$  is the set of complex numbers.

Thus  $x \in \mathbb{R} \Rightarrow x \in \mathbb{C}$

Hence, the set of all real numbers is contained in the set of all complex numbers.

Sets Ex 1.4 Q4(v)

False,  $\therefore a \in P$  but  $a \notin B$

Note that  $\{a\}$  is an element of  $B$  which is different from the element ' $a$ '.

Sets Ex 1.4 Q4(vi)

$A = \{L, I, T, E\}$	$[\therefore \text{repetition is not allowed}]$
$B = \{T, I, L, E\}$	$[\therefore \text{repetition is not allowed}]$
$= \{L, I, T, E\}$	$[\therefore \text{the manner in which the elements are}]$ $[\text{listed does not matter}]$

$\therefore$  Each element of  $A$  is an element of  $B$  and vice-versa

$\therefore A = B$

Hence, the given statement is true.
