

Time and Work Ex 11.1 Q5

Answer :

Time taken by Sita to do the work = 9 hours

Time taken by Mita to do the work = 6 hours

Time taken by Rita to do the work = 12 hours

Now,

$$\text{Work done by Sita} = \frac{1}{9}$$

$$\text{Work done by Mita} = \frac{1}{6}$$

$$\text{Work done by Rita} = \frac{1}{12}$$

$$\begin{aligned}\therefore \text{Work done by them together} &= \frac{1}{9} + \frac{1}{6} + \frac{1}{12} \\ &= \frac{4+6+3}{36} = \frac{13}{36}\end{aligned}$$

Thus, together they can do the work in $\frac{36}{13}$ hours.

Time and Work Ex 11.1 Q6

Answer :

Time taken by A to do the work = 20 hours

Time taken by B to do the work = 24 hours

Time taken by (A + B + C) to do the work = 8 hours

Now,

$$\text{Work done by A} = \frac{1}{20}$$

$$\text{Work done by B} = \frac{1}{24}$$

$$\text{Work done by (A + B + C)} = \frac{1}{8}$$

$$\therefore \text{Work done by C} = \frac{1}{8} - \left(\frac{1}{20} + \frac{1}{24} \right)$$

$$= \frac{1}{8} - \left(\frac{6}{120} + \frac{5}{120} \right) = \frac{1}{8} - \left(\frac{11}{120} \right)$$

$$= \frac{15-11}{120} = \frac{4}{120} = \frac{1}{30}$$

Thus, C can do the work in 30 hours.

Time and Work Ex 11.1 Q7

Answer :

Time taken by (A + B) to do the work = 18 days

Time taken by (B + C) to do the work = 24 days

Time taken by (A + C) to do the work = 36 days

Now,

$$\text{Work done by (A + B)} = \frac{1}{18}$$

$$\text{Work done by (B + C)} = \frac{1}{24}$$

$$\text{Work done by (A + C)} = \frac{1}{36}$$

$$\therefore \text{Work done together} = (A + B) + (B + C) + (A + C)$$

$$= \frac{1}{18} + \frac{1}{24} + \frac{1}{36}$$

$$= \frac{4+3+2}{72} = \frac{9}{72}$$

$$= \frac{1}{8}$$

$$\therefore \text{Work done together} = 2(A + B + C) = \frac{1}{8}$$

$$\therefore \text{Work done by (A + B + C)} = \frac{1}{16}$$

Thus, together they can finish the work in 16 days.

Time and Work Ex 11.1 Q8

Answer :

Time taken by (A + B) to do the work = 12 days

Time taken by (B + C) to do the work = 15 days

Time taken by (A + C) to do the work = 20 days

Now,

$$\text{Work done by (A + B)} = \frac{1}{12}$$

$$\text{Work done by (B + C)} = \frac{1}{15}$$

$$\text{Work done by (A + C)} = \frac{1}{20}$$

$$\therefore \text{Work done together} = (A + B) + (B + C) + (A + C)$$

$$= \frac{1}{12} + \frac{1}{15} + \frac{1}{20}$$

$$= \frac{5+4+3}{60} = \frac{12}{60}$$

$$= \frac{1}{5}$$

$$\therefore \text{Work done together} = 2(A + B + C) = \frac{1}{5}$$

$$\therefore \text{Work done by (A + B + C)} = \frac{1}{10}$$

$$\therefore \text{Work done by A alone} = (A + B + C) - (B + C)$$

$$= \frac{1}{10} - \frac{1}{15} = \frac{3-2}{30} = \frac{1}{30}$$

Thus, A alone can do the work in 30 days.

***** END *****
