

Lines and angles Ex 14.2 Q14

Answer :

In the given figure, $AB \parallel CD$ and $CD \parallel EF$.

Extend line CE to E' .

Thus, we have:

$$\angle BAC = \angle ACD = 70^\circ \quad (\text{Alternate angles})$$

Now,

$$\angle 3 + \angle CEF = 180^\circ \quad (\text{Linear pair})$$

$$\Rightarrow \angle 3 = 180^\circ - \angle CEF = 180^\circ - 130^\circ = 50^\circ$$

Since $CD \parallel EF$, then

$$\angle 2 = \angle 3 = 50^\circ \quad (\text{Corresponding angles})$$

$$\angle ACE = \angle ACD - \angle 2 = 70^\circ - 50^\circ = 20^\circ$$

Lines and angles Ex 14.2 Q15

Answer :

In the given figure, $l \parallel m$, $n \parallel p$ and $\angle 1 = 85^\circ$.

Now, let $\angle 4$ be the adjacent angle of $\angle 2$.

Thus, we have:

$$\angle 3 = \angle 1 = 85^\circ \quad (\text{Corresponding angles})$$

$$\angle 3 + \angle 2 = 180^\circ \quad (\text{Sum of interior angles on the same side of the transversal})$$

$$\therefore \angle 2 = 180^\circ - \angle 3 = 180^\circ - 85^\circ = 95^\circ$$
