

NCERT Solutions For Class 10 Chapter 7 Coordinate Geometry
Exercise 7.2

1. Find the coordinates of the point which divides the join of $(-1, 7)$ and $(4, -3)$ in the ratio $2:3$.

Ans. Let $x_1 = -1$, $x_2 = 4$, $y_1 = 7$ and $y_2 = -3$, $m_1 = 2$ and $m_2 = 3$

Using Section Formula to find coordinates of point which divides join of $(-1, 7)$ and $(4, -3)$ in the ratio $2:3$, we get

$$x = \frac{m_1 x_2 + m_2 x_1}{m_1 + m_2} = \frac{2 \times 4 + 3 \times (-1)}{2 + 3} = \frac{8 - 3}{5} = \frac{5}{5} = 1$$

$$y = \frac{m_1 y_2 + m_2 y_1}{m_1 + m_2} = \frac{2 \times (-3) + 3 \times 7}{2 + 3} = \frac{-6 + 21}{5} = \frac{15}{5} = 3$$

Therefore, the coordinates of point are $(1, 3)$ which divides join of $(-1, 7)$ and $(4, -3)$ in the ratio $2:3$.

2. Find the coordinates of the points of trisection of the line segment joining $(4, -1)$ and $(-2, -3)$.

$$\begin{array}{c} \text{C}(x_1, y_2) \quad \text{D}(x_2, y_2) \\ \text{A}(4, -1) \text{-----} \text{B}(-2, -3) \end{array}$$

Ans.

We want to find coordinates of the points of trisection of the line segment joining $(4, -1)$ and $(-2, -3)$.

We are given $AC = CD = DB$

We want to find coordinates of point C and D.

Let coordinates of point C be (x_1, y_1) and let coordinates of point D be (x_2, y_2) .

Clearly, point C divides line segment AB in 1:2 and point D divides line segment AB in 2:1.

Using Section Formula to find coordinates of point C which divides join of $(4, -1)$ and $(-2, -3)$ in the ratio 1:2, we get

$$x_1 = \frac{1 \times (-2) + 2 \times 4}{1 + 2} = \frac{-2 + 8}{3} = \frac{6}{3} = 2$$

$$y_1 = \frac{1 \times (-3) + 2 \times (-1)}{1 + 2} = \frac{-3 - 2}{3} = \frac{-5}{3}$$

Using Section Formula to find coordinates of point D which divides join of $(4, -1)$ and $(-2, -3)$ in the ratio 2:1, we get

$$x_2 = \frac{2 \times (-2) + 1 \times 4}{1 + 2} = \frac{-4 + 4}{3} = \frac{0}{3} = 0$$

$$y_2 = \frac{2 \times (-3) + 1 \times (-1)}{1 + 2} = \frac{-6 - 1}{3} = \frac{-7}{3}$$

Therefore, coordinates of point C are $(2, \frac{-5}{3})$

and coordinates of point D are $(0, \frac{-7}{3})$.

3. To conduct sports day activities, in your rectangular shaped school ground ABCD, lines have been drawn with chalk powder at a distance of 1 m each. 100 flower pots have been placed at a distance of 1 m from each other along AD. Niharika runs 14^{th} of the distance AD on the 2nd line and posts a green flag. Preet runs 15^{th} of the distance AD on the eighth line and posts a red flag. What is the distance between both the flags? If Rashmi has to post a blue flag exactly halfway between the line segment joining the two flags, where should she post her flag?

Ans. Niharika runs 14^{th} of the distance AD on the 2nd line and Preet runs 15^{th} of the distance AD on the 8th line.

the 2nd line and posts a green flag.

There are 100 flower pots. It means, she stops at 25th flower pot.

Therefore, the coordinates of point where she stops are (2 m, 25 m).

Preet runs 15th of the distance AD on the eighth line and posts a red flag. There are 100 flower pots. It means, she stops at 20th flower pot.

Therefore, the coordinates of point where she stops are (8, 20).

Using Distance Formula to find distance between points (2 m, 25 m) and (8 m, 20 m), we get

$$d = \sqrt{(2-8)^2 + (25-20)^2} = \sqrt{(-6)^2 + 5^2} = \sqrt{36+25} = \sqrt{61}m$$

Rashmi posts a blue flag exactly halfway the line segment joining the two flags.

Using section formula to find the coordinates of this point, we get

$$x = \frac{2+8}{2} = \frac{10}{2} = 5$$

$$y = \frac{25+20}{2} = \frac{45}{2}$$

Therefore, coordinates of point, where Rashmi posts her flag are $(5, \frac{45}{2})$.

It means she posts her flag in 5th line after covering $\frac{45}{2} = 22.5$ m of distance.

4. Find the ratio in which the line segment joining the points (-3, 10) and (6, -8) is divided by (-1, 6).

Ans. Let (-1, 6) divides line segment joining the points (-3, 10) and (6, -8) in k:1.

Using Section formula, we get

$$-1 = \frac{(-3) \times 1 + 6 \times k}{k+1}$$

$$\Rightarrow -k - 1 = (-3 + 6k)$$

$$\Rightarrow -7k = -2$$

$$\Rightarrow k = \frac{2}{7}$$

Therefore, the ratio is $\frac{2}{7}:1$ which is equivalent to 2:7.

Therefore, (-1, 6) divides line segment joining the points (-3, 10) and (6, -8) in 2:7.
