

Exercise 5D

Q1

Answer :

Suppose the length of the hypotenuse is a cm.

Then, by Pythagoras theorem:

$$\begin{aligned}a^2 &= 9^2 + 12^2 \\ \Rightarrow a^2 &= 81 + 144 \\ \Rightarrow a^2 &= 225 \\ \Rightarrow a &= \sqrt{225} \\ \Rightarrow a &= 15\end{aligned}$$

Hence, the length of the hypotenuse is 15 cm.

Q2

Answer :

Suppose the length of the other side is a cm.

Then, by Pythagoras theorem:

$$\begin{aligned}26^2 &= 10^2 + a^2 \\ \Rightarrow a^2 &= 676 - 100 \\ \Rightarrow a^2 &= 576 \\ \Rightarrow a &= \sqrt{576} \\ \Rightarrow a &= 24\end{aligned}$$

Hence, the length of the other side is 24 cm.

Q3

Answer :

Suppose the length of the other side is a cm.

Then, by Pythagoras theorem:

$$\begin{aligned}4.5^2 + a^2 &= 7.5^2 \\ \Rightarrow a^2 &= 56.25 - 20.25 \\ \Rightarrow a^2 &= 36 \\ \Rightarrow a &= \sqrt{36} \\ \Rightarrow a &= 6\end{aligned}$$

Hence, the length of the other side of the triangle is 6 cm.

Q4

Answer :

Suppose the length of the two legs of the right triangle are a cm and a cm.

Then, by Pythagoras theorem:

$$\begin{aligned}a^2 + a^2 &= 50 \\ \Rightarrow 2a^2 &= 50 \\ \Rightarrow a^2 &= 25 \\ \Rightarrow a &= \sqrt{25} \\ \Rightarrow a &= 5\end{aligned}$$

Hence, the length of each leg is 5 cm.

Q5

Answer :

The largest side of the triangle is 39 cm.

$$\begin{aligned}15^2 + 36^2 \\ = 225 + 1296 = 1521\end{aligned}$$

$$\begin{aligned}\text{Also, } 39^2 &= 1521 \\ \therefore 15^2 + 36^2 &= 39^2\end{aligned}$$

Sum of the square of the two sides is equal to the square of the third side.

Hence, the triangle is right angled.

Q6

Answer :

Suppose the length of the hypotenuse is c cm.

Then, by Pythagoras theorem:

$$\begin{aligned}a^2 + b^2 &= c^2 \\ \Rightarrow c^2 &= 6^2 + 4.5^2 \\ \Rightarrow c^2 &= 36 + 20.25 \\ \Rightarrow c^2 &= 56.25 \\ \Rightarrow c &= \sqrt{56.25} \\ \Rightarrow c &= 7.5\end{aligned}$$

Hence, the length of its hypotenuse is 7.5 cm.

Q7

Answer :

(i) Largest side, $c = 25$ cm

We have:

$$a^2 + b^2 = 225 + 400 = 625$$

$$\text{Also, } c^2 = 625$$

$$\therefore a^2 + b^2 = c^2$$

Hence, the given triangle is right angled using the Pythagoras theorem.

(ii) Largest side, $c = 16$ cm

We have:

$$a^2 + b^2 = 81 + 144 = 225$$

$$\text{Also, } c^2 = 256$$

$$\text{Here, } a^2 + b^2 \neq c^2$$

Therefore, the given triangle is not right angled.

Q8

Answer :

We have:

$$\angle B = 35^\circ \text{ and } \angle C = 55^\circ$$

$$\therefore \angle A = 180 - 35 - 55 = 90^\circ \quad (\text{since sum of the angles of any triangle is } 180^\circ)$$

***** END *****
