

Surface Area and volume of A Right Circular cylinder Ex 19.2 Q17 Answer:

Given data is as follows:

$$h = 10.5 \text{ m}$$

$$3(\pi r^2 + \pi r^2) = 2(2\pi rh)$$

We have to find the volume of the cylinder.

From the given data, we have

$$3(\pi r^2 + \pi r^2) = 2(2\pi rh)$$

$$6\pi r^2 = 4\pi rh$$

$$3r = 2h$$

But we know from the given data, that h = 10.5 m

Therefore.

Since we know r and h, we can easily find the volume of the cylinder.

Volume =
$$\pi r^2 h$$

$$=\frac{22}{7}\times7\times7\times10.5$$

 $Volume = 1617 \text{ m}^3$

Therefore, the volume of the cylinder is 1617 m³.

Surface Area and volume of A Right Circular cylinder Ex 19.2 Q18

Answer:

Given data is as follows:

$$h = 21 \text{ m}$$

Diameter = 6 m

Plastering rate = $Rs.9.50/m^2$

We have to find the volume and the cost of plastering the inner surface of this well. Given is the diameter, which is 6 m. Therefore,

$$r = \frac{6}{2}$$

$$r = 3$$

We know that,

 $Volume = \pi r^2 h$

$$=\frac{22}{7}\times3\times3\times21$$

 $Volume = 594 \text{ m}^3$

We know that,

Curved Surface Area = $2\pi rh$

$$=2\times\frac{22}{7}\times3\times21$$

Curved Surface Area =396 m²

Total cost of plastering = (Curved Surface Area)×(Plastering rate)

$$=396 \times 9.50$$

Therefore, the volume of this well is $594 \, \mathrm{m}^3$ and cost of plastering its inner surface is Rs.3762.
