

Question 12

Given: $3\tan\theta = 4$

$$\Rightarrow tan\theta = \frac{4}{3}$$

Let us draw a ΔABC in which $\angle B$ = 90^{0} and $\angle A$ = θ

By Pythagoras theorem, we have

$$AC^{2} = AB^{2} + BC^{2}$$

$$= (4k)^{2} + (3k)^{2}$$

$$= 16k^{2} + 9k^{2} = 25k^{2}$$

$$AC = 5k$$

Now,

$$\sin\theta = \frac{BC}{AC} = \frac{4k}{5k} = \frac{4}{5}$$

$$AB \quad 3k \quad 3$$

$$\cos\theta = \frac{AB}{AC} = \frac{3k}{5k} = \frac{3}{5}$$

LHS =
$$\frac{4\cos\theta - \sin\theta}{2\cos\theta + \sin\theta} = \frac{4 \times \frac{3}{5} - \frac{4}{5}}{2 \times \frac{3}{5} + \frac{4}{5}}$$
