

Exercise 9B

Question 5:

We prepare the cumulative frequency table as given below:

Consumption	Frequency	C.F
	fi	
65 - 85	4	4
85 - 105	5	9
105 - 125	13	22
125 - 145	20	42
145 - 165	14	56
165 - 185	7	63
185 - 205	4	67
4.0	$N = \sum_{i} f_{i} = 67$	

Now, N = 67
$$\Rightarrow$$
 $\left(\frac{N}{2}\right) = \frac{67}{2} = 33.5$

The cumulative frequency just greater than 33.5 is 42 and the corresponding class 125 - 145.

Thus, the median class is 125 - 145

$$\therefore$$
 I = 125, h = 20, f_i = 20 and c = CF preceding the median class = 22, $\frac{N}{2}$ = 33.5

Median =
$$m_e = I + \left[h \times \frac{\left(\frac{N}{2} - c\right)}{f} \right] = 125 + \left[20 \times \frac{(33.5 - 22)}{20} \right]$$

= $(125 + 11.5) = 136.5$

Hence median of electricity consumed is 136.5

Question 6:

Frequency table is given below:

Height	Frequency	C.F
	fi	
135 - 140	6	6
140 - 145	10	16
145 - 150	18	34
150 - 155	22	56
155 - 160	20	76
160 - 165	15	91
165 - 170	6	97
170 - 175	3	100
	$N = \sum_{i} f_{i} = 100$	

N = 100,
$$\left(\frac{N}{2}\right)$$
 = 50

The cumulative frequency just greater than 50 is 56 and the corresponding class is 150 - 155

Thus, the median class is 150 - 155

I = 150, h = 5, f = 22, c = C.F.preceding median class = 34

Median
$$m_e = I + \left[h \times \frac{\left(\frac{N}{2} - c \right)}{f} \right]$$

= $150 + \left(5 \times \frac{\left(50 - 34 \right)}{22} \right)$
= $150 + 3.64 = 153.64$

Hence, Median = 153.64

******* END *******
