

Exercise 11A

Question 5:

The given AP is
$$6,7\frac{3}{4}, 9\frac{1}{2}, 11\frac{1}{4}...$$

First term = 6, common difference =
$$\left(7\frac{3}{4} - 6\right)$$

= $\left(\frac{31}{4} - 6\right) = \frac{7}{4}$

:
$$a = 6, d = \frac{7}{4}$$

The nth term is given by

$$T_n = a + (n - 1)d$$

$$T_{37} = 6 + (37 - 1)\frac{7}{4} = 6 + 63 = 69$$

Hence, 37th term is 69

Question 6:

The given AP is 5,
$$4\frac{1}{2}$$
, 4, $3\frac{1}{2}$, 3, ...

The first term = 5,

common difference =
$$\left(4\frac{1}{2}-5\right) = \left(\frac{9}{2}-5\right) = \frac{-1}{2}$$

:
$$a = 5$$
, $d = \frac{-1}{2}$

The nth term is given by

$$T_n = a + (n - 1)d$$

$$T_{25} = 5 + (25 - 1)(-\frac{1}{2}) = 5 - 12 = -7$$

Hence the 25th term is - 7

Ouestion 7:

In the given AP, we have a = 6 and d = (10 - 6) = 4 Suppose there are n terms in the given AP, then $T_n = 174 \Rightarrow \alpha + (n-1) d = 174$

$$\Rightarrow$$
 6 + (n-1) 4 = 174

$$\Rightarrow$$
 6 + 4n - 4 = 174
 \Rightarrow 2 + 4n = 174 \Rightarrow n = 172/4 \Rightarrow 43
Hence there are 43 terms in the given AP

Question 8:

In the given AP we have a = 41 and d = 38 - 41 = -3

Suppose there are n terms in AP, then

$$T_n = 8 \Rightarrow a + (n-1) d = 8$$

$$\Rightarrow$$
 41 + (n-1) (-3) = 8

$$\Rightarrow$$
 41 - 3n + 3 = 8

$$\Rightarrow$$
 -3n = -36 \Rightarrow n = 12

Hence there are 12 terms in the given AP

Question 9:

In the given AP, we have a = 3 and d = 8 - 3 = 5

Suppose there are n terms in given AP, then

$$T_n = a + (n-1) d = 88$$

$$\Rightarrow$$
 3 + (n-1) 5 = 88

$$\Rightarrow$$
 3 + 5n - 5 = 88

$$\Rightarrow$$
 5n = 90

$$\Rightarrow$$
 n = 12

Hence, the 18th term of given AP is 88

Question 10:

In the given AP, we have a = 72 and d = 68 - 72 = -4

Suppose there are n terms in given AP, we have

$$T_n = 0 \Rightarrow a + (n-1) d = 0$$

$$\Rightarrow$$
 72 + (n-1) (-4) = 0

$$\Rightarrow$$
 72 - 4n + 4 = 0

$$\Rightarrow$$
 4n = 76

$$\Rightarrow$$
 n = 19

Hence, the 19th term in the given AP is 0

******* END *******
