

Higher Order Derivatives Ex 12.1 Q27

$$y = \left[log \left(x + \sqrt{1 + x^2} \right) \right]^2$$

differentiating w.r.t.x

$$\Rightarrow \frac{dy}{dx} = 2\log\left(x + \sqrt{1 + x^2}\right) \times \frac{1}{x + \sqrt{1 + x^2}} \times \left(1 + \frac{1 \times 2x}{2\sqrt{1 + x^2}}\right)$$

$$\Rightarrow y_1 = \frac{2\log(x + \sqrt{1 + x^2})}{x + \sqrt{1 + x^2}} \times \frac{\sqrt{1 + x^2} + x}{\sqrt{1 + x^2}} = \frac{2\log(x + \sqrt{1 + x^2})}{\sqrt{1 + x^2}}$$

squaring both sides

$$\Rightarrow (y_1)^2 = \frac{4}{1+x^2} \left[log \left(x + \sqrt{1+x^2} \right) \right]^2 = \frac{4y}{1+x^2}$$

$$\Rightarrow (1+x^2) (y_1)^2 = 4y$$

differentiating w.r.t. x

$$\Rightarrow \qquad (1 + x^2) 2y_1y_2 + 2x (y_1)^2 = 4y_1$$

$$\Rightarrow \qquad \left(1+x^2\right)y_2+xy_1=2$$

Hence proved!

Higher Order Derivatives Ex 12.1 Q28

The given relationship is $y = (\tan^{-1} x)^2$

Then,

$$y_1 = 2 \tan^{-1} x \frac{d}{dx} (\tan^{-1} x)$$

 $\Rightarrow y_1 = 2 \tan^{-1} x \cdot \frac{1}{1 + x^2}$

$$\Rightarrow$$
 $(1+x^2)y_1 = 2 \tan^{-1} x$

Again differentiating with respect to x on both the sides, we obtain

$$(1+x^2)y_2 + 2xy_1 = 2\left(\frac{1}{1+x^2}\right)$$

$$\Rightarrow (1+x^2)^2 y_2 + 2x(1+x^2)y_1 = 2$$

Hence, proved.

Higher Order Derivatives Ex 12.1 Q29

$$y = \cot x$$

differentiating w.r.t.x

$$\Rightarrow \frac{dy}{dx} = -\cos ec^2 x$$

differentiating w.r.t.x

$$\Rightarrow \qquad \frac{d^2y}{dx^2} = -\left[2\cos ecx\left(-\cos ecx\cot x\right)\right] = 2\cos ec^2x\cot x = -2\frac{dy}{dx}.y$$

$$\Rightarrow \qquad \frac{d^2y}{dx^2} + 2y\frac{dy}{dx} = 0$$

Higher Order Derivatives Ex 12.1 Q30

$$y = log\left(\frac{x^2}{e^2}\right)$$

differentiating w.r.t.x

$$\Rightarrow \frac{dy}{dx} = \frac{1}{x^2/e^2} \times \frac{1}{e^2} \times 2x = \frac{2}{x}$$

differentiating w.r.t. x

$$\Rightarrow \frac{d^2y}{dx^2} = 2\left(\frac{-1}{x^2}\right) = \frac{-2}{x^2}$$
