

Exercise 2H

```
Question 4:
9x^2 + 16y^2 + 4z^2 - 24xy + 16yz - 12xz
=(-3x)^2+(4y)^2+(2z)^2+2(-3x)(4y)+2(4y)(2z)+2(2z)(-3x)
=(-3x + 4y + 2z)^2.
Question 5:
25x^2 + 4y^2 + 9z^2 - 20xy - 12yz + 30xz
= (5x)^2 + (-2y)^2 + (3z)^2 + 2(5x)(-2y) + 2(-2y)(3z) + 2(3z)(5x)
= (5x - 2y + 3z)^2
Question 6:
(i) (99)^2
= (100 - 1)^2
[Since (a - b)^2 = a^2 + b^2 - 2ab]
= (100)^2 - 2(100)(1) + (1)^2
= 10000 - 200 + 1
= 9801.
(ii) (998)^2
=(1000 - 2)^2
=(1000)^2 - 2(1000)(2) + (2)^2
= 1000000 - 4000 + 4
= 996004.
```
