

Quadratic Equations Ex 8.13 Q7 Answer:

Let x students planned a picnic.

Then, the share of each student $=\frac{500}{}$

According to question, 5 students fail to go picnic, then remaining students = (x-5).

Therefore, new share of each student = $\frac{500}{x-5}$

It is given that

$$\frac{500}{x-5} - \frac{500}{x} = 5$$
$$\frac{500x - 500(x-5)}{(x-5)x} = 5$$

$$\frac{500x - 500x + 2500}{(x-5)x} = 5$$

$$\frac{2500}{\left(x-5\right)x} = 5$$

$$5(x^2 - 5x) = 2500$$

$$(x^2 - 5x) = 500$$

$$x^2 - 5x - 500 = 0$$

$$x^2 + 20x - 25x - 500 = 0$$

$$x(x+20)-25(x+20)=0$$

$$(x+20)(x-25)=0$$

$$(x+20) = 0$$
 or $(x-25) = 0$
 $x = -20$ $x = 25$

$$x = -20$$
 $x = 25$
Because x cannot be negative.

Thus, the total numbers of students attend a picnic

$$= x - 5$$

$$=25-5$$

$$= 20$$

Therefore, the total numbers of students attend a picnic be x = 20

Quadratic Equations Ex 8.13 Q8

Answer:

Let P be the required location on the boundary of a circular park such that its distance from gate B is P = P metres that is P = P metres

Then, AP = x + 7

In the right triangle ABP we have by using Pythagoras theorem

$$AP^{2} + BP^{2} = AB^{2}$$

$$(x+7)^{2} + x^{2} = (13)^{2}$$

$$x^{2} + 14x + 49 + x^{2} = 169$$

$$2x^{2} + 14x + 49 - 169 = 0$$

$$2x^2 + 14x - 120 = 0$$
$$2(x^2 + 7x - 60) = 0$$

$$2(x^2 + 7x - 60) = 0$$
$$x^2 + 7x - 60 = 0$$

$$x^2 + 12x - 5x - 60 = 0$$

$$x(x+12)-5(x+12)=0$$

$$(x+12)(x-5)=0$$

$$(x+12) = 0$$
 or $(x-5) = 0$
 $x = -12$ or $x = 5$

But, the side of right triangle can never be negative.

Therefore, x = 5

Hence, P is at a distance of 5 meters from the gate B.

Quadratic Equations Ex 8.13 Q9

Answer:

Let marks obtained by P in mathematics be x, then in science = (28-x)

It is given that,

$$(x+3)\times(28-x-4)=180$$

$$(x+3)\times(24-x)=180$$

$$24x - x^2 + 72 - 3x = 180$$

$$-x^2 + 21x + 72 - 180 = 0$$

$$-(x^2-21x+108)=0$$

$$x^2 - 21x + 108 = 0$$

$$x^2 - 12x - 9x + 108 = 0$$

$$x(x-12)-9(x-12)=0$$

$$(x-12)(x-9)=0$$

$$(x-12)=0$$
 or $(x-9)=0$

$$x = 12$$
 $x = 9$

Therefore, when x = 12 then

$$(28-x)=(28-12)$$

$$=16$$

Hence, marks in mathematics x = 12 and marks in science = 16.

Or, when x = 9 then

$$(28-x)=(28-9)$$

$$=19$$

Hence, marks in mathematics x = 9 and marks in science = 19
