

## Maxima and Minima 18.3 Q4

The given function is  $f(x) = \frac{\log x}{x}$ .

$$f'(x) = \frac{x(\frac{1}{x}) - \log x}{x^2} = \frac{1 - \log x}{x^2}$$

Now, 
$$f'(x) = 0$$

$$\Rightarrow 1 - \log x = 0$$

$$\Rightarrow \log x = 1$$

$$\Rightarrow \log x = \log e$$

$$\Rightarrow x = \epsilon$$

Now, 
$$f''(x) = \frac{x^2 \left(-\frac{1}{x}\right) - (1 - \log x)(2x)}{x^4}$$
  

$$= \frac{-x - 2x(1 - \log x)}{x^4}$$

$$= \frac{-3 + 2\log x}{x^3}$$
Now,  $f''(e) = \frac{-3 + 2\log e}{e^3} = \frac{-3 + 2}{e^3} = \frac{-1}{e^3} < 0$ 

Therefore, by second derivative test, f is the maximum at x = e.

Maxima and Minima 18.3 Q5

$$f(x) = \frac{4}{x+2} + x$$

$$f'(x) = \frac{-4}{(x+2)^2} + 1$$

$$f''(x) = \frac{8}{(x+2)^3}$$

For maximum and minimum value,

$$f'(x) = 0$$

$$\Rightarrow \frac{-4}{(x+2)^2} + 1 = 0$$

$$\Rightarrow (x+2)^2 = 4$$

$$\Rightarrow x^2 + 4x = 0$$

$$\Rightarrow x(x+4) = 0$$

$$x = 0, -4$$

Now,

$$f''(0) = 1 > 0$$

$$x = 0 \text{ is point of minima}$$

$$f''(-4) = -1 < 0$$

$$x = -4$$
 is point of maxima

Maxima and Minima 18.3 Q6

We have,

$$y = \tan x - 2x$$

$$y' = \sec^2 x - 2$$

$$y'' = 2 \sec^2 x \tan x$$

For maximum and minimum value,

$$v' = 0$$

$$\Rightarrow$$
  $\sec^2 x = 2$ 

$$\Rightarrow$$
 sec $x = \pm \sqrt{2}$ 

$$\Rightarrow \qquad x = \frac{\pi}{4}, \frac{3\pi}{4}$$

$$y''\left(\frac{\pi}{4}\right) = 4 > 0$$

$$\therefore \qquad x = \frac{\pi}{4} \text{ is point of minima}$$

$$y^{-1}\left(\frac{3\pi}{4}\right) = -4 < 0$$

$$\therefore \qquad x = \frac{3\pi}{4} \text{ is point of maxima}$$

Hence,

max value = 
$$f\left(\frac{3\pi}{4}\right) = -1 - \frac{3\pi}{2}$$
  
min value =  $f\left(\frac{\pi}{4}\right) = 1 - \frac{\pi}{2}$ .

Maxima and Minima 18.3 Q7

Consider the function

$$f(x) = x^3 + ax^2 + bx + c$$

Then 
$$f'(x) = 3x^2 + 2ax + b$$

It is given that f(x) is maximum at x = -1.

$$f'(-1) = 3(-1)^2 + 2a(-1) + b = 0$$

$$\Rightarrow$$
 f'(-1) = 3 - 2a + b = 0...(1)

It is given that f(x) is minimum at x = 3.

$$f'(3) = 3(3)^2 + 2a(3) + b = 0$$

$$\Rightarrow$$
 f'(3) = 27 + 6a + b = 0...(2)

Solving equations (1) and (2), we have,

$$a = -3$$
 and  $b = -9$ 

Since f'(x) is independent of constant c, it can be any real number.
