

Arithmetic Progressions Ex 9.3 Q23

Answer:

In the given problem, we have an A.P. which consists of n terms.

Here,

The first term (a) = a

The last term $(a_n) = l$

Now, as we know,

$$a_n = a + (n-1)d$$

So, for the m^{th} term from the beginning, we take (n = m),

$$a_m = a + (m-1)d$$

= $a + md - d$ (1)

Similarly, for the m^{th} term from the end, we can take l as the first term.

So, we get,

$$a_{m'} = l - (m-1)d$$

= $l - md + d$ (2)

Now, we need to prove $a_m + a_{m'} = a + l$

So, adding (1) and (2), we get,

$$\begin{aligned} a_m + a_{m'} &= \left(a + md - d\right) + \left(l - md + d\right) \\ &= a + md - d + l - md + d \\ &= a + l \\ \end{aligned}$$
 Therefore,
$$\boxed{a_m + a_{m'} = a + l}$$

Hence proved

Arithmetic Progressions Ex 9.3 Q24

Answer

Here, let us take the first term of the A.P as a and the common difference of the A.P as d Now, as we know,

$$a_n = a + (n-1)d$$

So, for 3^{rd} term (n = 3).

$$a_3 = a + (3-1)d$$

$$16 = a + 2d$$

$$a = 16 - 2d$$
(1)

Also, for 5^{th} term (n = 5),

$$a_5 = a + (5-1)d$$

$$= a + 4d$$

For 7^{th} term (n = 7),

$$a_7 = a + (7-1)d$$

$$= a + 6d$$

Now, we are given,

$$a_7 = 12 + a_5$$

$$a + 6d = 12 + a + 4d$$

$$6d - 4d = 12$$

$$2d = 12$$

$$d = 6$$

Substituting the value of d in (1), we get,

$$a = 16 - 2(6)$$

= $16 - 12$
= 4

So, the first term is 4 and the common difference is 6.

Therefore, the A.P. is 4,10,16,22,...

Arithmetic Progressions Ex 9.3 Q25 Answer:

Here, let us take the first term of the A.P. as a and the common difference of the A.P as d Now, as we know,

$$a_n = a + (n-1)d$$

So, for 7th term $(n = 7)$,
 $a_7 = a + (7-1)d$
 $32 = a + 6d$ (1)
Also, for 13th term $(n = 13)$,
 $a_{13} = a + (13-1)d$

$$62 = a + 12d$$
(2)

Now, on subtracting (2) from (1), we get,

$$62-32 = (a+12d) - (a+6d)$$

$$30 = a+12d - a - 6d$$

$$30 = 6d$$

$$d = \frac{30}{6}$$

$$d = 5$$

Substituting the value of d in (1), we get,

$$32 = a + 6(5)$$

$$32 = a + 30$$

$$a = 32 - 30$$

$$a = 2$$

So, the first term is 2 and the common difference is 5.

Therefore, the A.P. is 2,7,12,27,...
