

Triangles Ex 4.3 Q2

Answer:

It is given that AE is the bisector of the exterior $\angle CAD$. Meeting BC produced E and $AB = 10 \, \mathrm{cm}$, $AC = 6 \, \mathrm{cm}$ and $BC = 12 \, \mathrm{cm}$. Since AE is the bisector of the exterior $\angle CAD$.

So
$$\frac{BE}{CE} = \frac{AB}{AC}$$

$$\frac{12+x}{x} = \frac{10}{6}$$

$$72+6x = 10x$$

$$4x = 72$$

$$x = 18$$
Hence $CE = 18$ cm

Triangles Ex 4.3 Q3

Answer:

It is given that in
$$\triangle ABC$$
, $\frac{AB}{AC} = \frac{BD}{DC}$, $\angle B = 70^{\circ}$ and $\angle C = 50^{\circ}$.

We have to find $\angle BAD$.

$$\angle A = 180^{\circ} - (70^{\circ} + 50^{\circ})$$

= $180^{\circ} - 120^{\circ}$
= 60°

Since $\frac{AB}{AC} = \frac{BD}{DC}$, therefore, AD is the bisector of $\angle A$.

Hence,
$$\angle BAD = \frac{60^{\circ}}{2} = 30^{\circ}$$

Triangles Ex 4.3 Q4

Answer:

We have to prove that
$$\frac{AB}{AC} = \frac{BD}{DC}$$
.

In AABC,

$$\angle 1 = \angle 2$$
 (Given)

So, AD is the bisector of $\angle A$.

Therefore,
$$\frac{AB}{AC} = \frac{BD}{DC}$$
