

NCERT Solutions for class 8 maths squares and square roots Ex-6.2

Q1. Find the squares of the following numbers:

- (i) 32
- (ii) 35
- (iii) 86
- (iv) 93
- (v) 71
- (vi) 46

Ans: (i)

$$(32)^2 = (30+2)^2 = (30)^2 + 2 \times 30 \times 2 + (2)^2$$

$$\left[\because \left(a+b \right)^2 = a^2 + 2ab + b^2 \right]$$

$$= 900 + 120 + 4 = 1024$$

(ii)
$$(35)^2 = (30+5)^2 = (30)^2 + 2 \times 30 \times 5 + (5)^2$$

$$\left[\because \left(a+b \right)^2 = a^2 + 2ab + b^2 \right]$$

$$= 900 + 300 + 25 = 1225$$

(iii)
$$(86)^2 = (80+6)^2 = (80)^2 + 2 \times 80 \times 6 + (6)^2$$

$$\left[\because \left(a+b \right)^2 = a^2 + 2ab + b^2 \right]$$

$$= 1600 + 960 + 36 = 7386$$

(iv)
$$(93)^2 = (90+3)^2 = (90)^2 + 2 \times 90 \times 3 + (3)^2$$

$$\left[\because (a+b)^2 = a^2 + 2ab + b^2\right]$$

$$= 8100 + 540 + 9 = 8649$$

(v)
$$(71)^2 = (70+1)^2 = (70)^2 + 2 \times 70 \times 1 + (1)^2$$

$$\left[\because (a+b)^2 = a^2 + 2ab + b^2\right]$$

(vi)
$$(46)^2 = (40+6)^2 = (40)^2 + 2 \times 40 \times 6 + (6)^2$$

$$\left[\because (a+b)^2 = a^2 + 2ab + b^2\right]$$

$$= 1600 + 480 + 36 = 2116$$

Q2. Write a Pythagoras triplet whose one member is:

\-/ -

- (ii) 14
- (iii) 16
- (iv) 18

Ans: (i) There are three numbers 2m, $m^2 - 1$ and $m^2 + 1$ in a Pythagorean Triplet.

Here,
$$2m = 6 \implies m = \frac{6}{2} = 3$$

Therefore, Second number

$$(m^2-1)=(3)^2-1=9-1=8$$

Third number $m^2 + 1 = (3)^2 + 1 = 9 + 1 = 10$

Hence, Pythagorean triplet is (6, 8, 10).

(ii) There are three numbers

2m, m^2-1 and m^2+1 in a Pythagorean Triplet.

Here,
$$2m = 14 \implies m = \frac{14}{2} = 7$$

Therefore, Second number

$$(m^2-1)=(7)^2-1=49-1=48$$

Third number $m^2 + 1 = (7)^2 + 1 = 49 + 1 = 50$

Hence, Pythagorean triplet is (14, 48, 50).

(iii) There are three numbers $^{2m, m^2-1}$ and $^{m^2+1}$ in a Pythagorean Triplet.

Here,
$$2m = 16 \implies m = \frac{16}{2} = 8$$

Therefore, Second number

$$(m^2-1)=(8)^2-1=64-1=63$$

Third number $m^2 + 1 = (8)^2 + 1 = 64 + 1 = 65$

Hence, Pythagorean triplet is (16, 63, 65).

(iv) There are three numbers $^{2m, m^2-1}$ and $^{m^2+1}$ in a Pythagorean Triplet.

Here,
$$2m = 18 \implies m = \frac{18}{2} = 9$$

Therefore, Second number

$$(m^2-1)=(9)^2-1=81-1=80$$

Third number $m^2 + 1 = (9)^2 + 1 = 81 + 1 = 82$

Hence, Pythagorean triplet is (18, 80, 82).

********** END ********
