

## Areas Related to Circles Ex 15.1 Q7 Answer:

It is given that a horse is tethered to one corner of a rectangular field (40 m × 36 m) by a 14 m long

Let r m be the radius of a circle. Then area A of circle is

A = 
$$\pi r^2$$
 cm<sup>2</sup>  
=  $\frac{22}{7} \times 14 \times 14$  cm<sup>2</sup>  
= 616 cm<sup>2</sup>

Since the horse can graze inside the rectangular field only, the required area is quadrant of circle. So,

The required area = 
$$\frac{A}{4}$$
  
=  $\frac{616}{4}$  cm<sup>2</sup>  
=  $\boxed{154 \text{ cm}^2}$   
Hence the horse can graze  $\boxed{154 \text{ cm}^2}$  area.

## Areas Related to Circles Ex 15.1 Q8

## Answer:

The length and width of rectangle ABCD is given by AB = 40 cm and AD = 28 cm respectively. Now, we will find the area of rectangle.

Area of rectangle = 
$$l \times w$$

$$=40 \times 28$$

$$=1120 \text{ cm}^2$$

It is given that a semicircular portion with BC as diameter is cutoff from rectangle. So,

radius of semicircle = 
$$\frac{BC}{2}$$
  
=  $\frac{28}{2}$   
= 14 cm  
Now, The area of semicircle =  $\frac{1}{2}\pi r^2$ 

Substituting the value of r,

The area of semicircle 
$$=\frac{1}{2} \times \frac{22}{7} \times 14 \times 14$$

The area A of remaining paper is

A = Area of rectangle - Area of semicircle

$$= 812 \text{ cm}^2$$

Thus, the area of remaining paper is 812 cm<sup>2</sup>

Areas Related to Circles Ex 15.1 Q9

## Answer:

Let the radius of two circles be  $r_1$  cm and  $r_2$  cm respectively. Then their circumferences are  $C_1=2\pi r_1$  cm and  $C_2=2\pi r_2$  cm respectively and their areas are  $A_1=\pi r_1^2$  cm<sup>2</sup> and  $A_2=\pi r_2^2$  cm<sup>2</sup> respectively.

It is given that,

$$\frac{C_1}{C_2} = \frac{2}{3}$$

$$\frac{2\pi r_1}{2\pi r_2} = \frac{2}{3}$$

$$\frac{r_1}{r_2} = \frac{2}{3}$$

Now we will calculate the ratio of their areas,

$$\frac{A_1}{A_2} = \frac{\pi r_1^2}{\pi r_2^2}$$
$$= \frac{r_1^2}{r_2^2}$$
$$= \left(\frac{r_1}{r}\right)^2$$

Substituting the value of  $\frac{r_1}{r_2}$ ,

$$\frac{A_1}{A_2} = \left(\frac{2}{3}\right)^2$$
$$= \left[\frac{4}{9}\right]$$

Hence the ratio of their Areas is 4:9
