

Exercise 7B

Q29

Answer:

Let the two complementary angles be x° and $(90-x)^{\circ}$.

According to the question, we have:

$$x - (90 - x) = 8$$

$$\Rightarrow x - 90 + x = 8$$

$$\Rightarrow 2x = 98$$

$$\Rightarrow x = 49$$

... The measures of the complementary angles are 49° and $(90-49)^{\circ}=41^{\circ}$.

Q30

Answer:

Let the two supplementary angles be x° and $(180 - x)^{\circ}$.

$$\therefore x - (180 - x) = 44$$

$$\Rightarrow x - 180 + x = 44^{\circ}$$

$$\Rightarrow 2x = 224$$

$$\Rightarrow x = 112$$

... The measures of the supplementary angles are 112° and (180 – 112)°, i.e., 68°.

Q31

Answer:

Let the base angles of the isosceles triangle be x° each.

Then, the measure the vertex angle will be $(2x)^{\circ}$.

According to the question, we have:

$$x + x + 2x = 180$$
 (Sum of three sides of a triangle)

$$\Rightarrow 4x = 180$$

$$\Rightarrow x = \frac{180}{4}$$

$$\Rightarrow x = 45$$

 \therefore Each base angle measures 45° and the vertex angle measures $(2 \times 45)^{\circ}$, i.e., 90°.

Q32

Answer:

Let the length of the total journey be x km.

According to the question, we have:

$$\frac{3}{5}x + \frac{1}{4}x + \frac{1}{8}x + 2 = x$$

$$\Rightarrow \frac{24x+10x+5x+80}{42} = x$$

$$\Rightarrow 39x + 80 = 40x$$

$$\Rightarrow x = 80$$

... The length of his total journey is 80 km.

Q33

Answer:

Let x be the number of days of his absence.

 \therefore Number of days of his presence = (20-x)

Now,
$$(20-x)120-10x=1880$$

$$\Rightarrow 2400 - 120x - 10x = 1880$$

$$\Rightarrow 2400 - 1880 = 130x$$

$$\Rightarrow 130x = 520$$

$$\Rightarrow x = 4$$

 \therefore Number of days of his absence = 4

Q34

Answer:

Let the worth of Hari Babu's property be Rs x.

According to the question, we have:

Son's share
$$=\frac{1}{4}x$$

Daughter's share $=\frac{1}{3}x$

Wife's share
$$=\left\{x-\left(rac{1}{4}\,x+rac{1}{3}\,x
ight)
ight\}$$

It is given that his wife's share is Rs 18000.

i.e.,
$$x - \left(\frac{1}{4}x + \frac{1}{3}x\right) = 18000$$

$$\Rightarrow x - \left(\frac{1}{3}x + \frac{1}{4}x\right) = 18000$$

$$\Rightarrow x - \frac{7x}{12} = 18000$$

$$\Rightarrow \frac{5x}{12} = 18000$$

$$\Rightarrow x = \frac{18000^{3600} \times 12}{5}$$

$$\Rightarrow x = 43200$$

:. Hari Babu's total property is worth Rs 43200.

Q35

Answer:

Let the volume of the pure alcohol be x ml.

Initial concentration=15%

So, initial amount of alcohol in the solution will be = $\frac{15}{100} \times 400 = 60$ ml

To make the strength of the solution 32%, we will keep the amount of water constant and ad On adding pure alcohol, the volume of the solution increases to 400 + x.

According to the question, we have:

$$\frac{x+60}{400+x} = \frac{32}{100}$$

$$\Rightarrow 100x + 6000 = 12800 + 32x$$

 $\Rightarrow 100x - 32x = 12800 - 6000$

$$\Rightarrow 100x - 32x = 12800 - 600$$

$$\Rightarrow 68x = 6800$$

$$\Rightarrow x = 100$$

So, amount of pure alcohol to be added=100 ml

********* END *******
