

Surface Areas and Volume of a Cuboid and Cube Ex 18.2 Q21

Answer:

We have, dimensions of the plot that is dug,

Length
$$(I) = 50 \,\mathrm{m}$$

Breadth
$$(b) = 40 \,\mathrm{m}$$

Depth
$$(h) = 7 \,\mathrm{m}$$

Length of the field $(L) = 200 \,\mathrm{m}$

Breadth of the field
$$(B) = 150 \,\mathrm{m}$$

We need to find the level of field raised

Here, the volume of earth taken out,

$$V = lbh$$

$$=(50\times40\times7)$$
m³

So the rise in the level of the field

$$=\frac{V}{L\times B}$$

$$=\frac{50\times40\times7}{200\times150}$$

$$=\frac{7}{5\times3}$$

$$=\frac{7}{15}$$

$$= 0.47 \, \text{m}$$

The level of the field is raised by $0.47 \,\mathrm{m}$

Surface Areas and Volume of a Cuboid and Cube Ex 18.2 Q22

Answer:

We have.

Length of the field (L) = 18 m

Width of the field (B) = 15 m

Length of the pit (I) = 7.5 m

Breadth of the pit (b) = 6 m

Depth of the pit (h) = 0.8 m

We have to find the level of field raised

Volume of the earth dug out

$$V = lbh$$
$$= (7.5 \times 6 \times 0.8) \text{ m}^3$$

The area on which the earth has to be spread,

$$A = (L \times B) - lb$$

$$= 18 \times 15 - 7.5 \times 6$$

$$= 270 - 45$$

$$= 225 \text{ m}^2$$

The rise in the level of the field

$$= \frac{V}{A}$$

$$= \frac{7.5 \times 6 \times 0.8}{225}$$

$$= \frac{45 \times 0.8}{225}$$

$$= \frac{0.8}{5}$$

$$= 0.16 \text{ m}$$

$$= 16 \text{ cm}$$

The level of the field has been raised to 16cm.
