

Arithematic Progressions Ex 19.5 Q1(i)

$$\frac{b+c}{a}, \frac{c+a}{b}, \frac{a+b}{c} \text{ will be in A.P if } \frac{c+a}{b} - \frac{b+c}{a} = \frac{a+b}{c} - \frac{c+a}{b}$$
if
$$\frac{ca+a^2-b^2-cb}{ab} = \frac{ab+b^2-c^2-ac}{bc}$$

LHS
$$\Rightarrow \frac{ca+a^2-b^2-cb}{ab}$$

 $\Rightarrow \frac{c^2a+a^2c-b^2c-c^2b}{abc}$
 $\Rightarrow \frac{c(a-b)[a+b+c]}{abc}$ ---(i)

RHS
$$\Rightarrow \frac{ab+b^2-c^2-ac}{bc}$$

 $\Rightarrow \frac{a^2b+ab^2-ac^2-a^2c}{abc}$
 $\Rightarrow \frac{a(b-c)[a+b+c]}{abc}$ ---(ii)

and since
$$\frac{1}{a}$$
, $\frac{1}{b}$, $\frac{1}{c}$ are in A.P
$$\frac{1}{b} - \frac{1}{a} = \frac{1}{c} - \frac{1}{b}$$

$$c(b-a) = a(b-c) \qquad ---(iii)$$

.: LHS = RHS and the given terms are in A.P.

Arithematic Progressions Ex 19.5 Q1(ii) a(b+c), b(c+a), c(a+b) are in A.P if b(c+a) - a(b+c) = c(a+b) - b(c+a)

LHS =
$$b(c + a) - a(b + c)$$

= $bc + ab - ab - ac$
= $c(b - a)$ ---(i)

RHS =
$$c(a+b) - b(c+a)$$

= $ca + cb - bc - ba$
= $a(c-b)$ ---(ii)
and $\frac{1}{a}, \frac{1}{b}, \frac{1}{c}$ are in A.P
:. $\frac{1}{a} - \frac{1}{b} = \frac{1}{b} - \frac{1}{c}$
or $c(b-a) = a(c-b)$ ----(iii)

From (i),(ii) and (iii)
$$a(b+c),b(c+a),c(a+b) \ \text{are in A.P}$$

Arithematic Progressions Ex 19.5 Q2

$$\frac{a}{b+c}$$
, $\frac{b}{a+c}$, $\frac{c}{a+b}$ are in A.P if $\frac{b}{a+c}$ - $\frac{a}{b+c}$ = $\frac{c}{a+b}$ - $\frac{b}{a+c}$

LHS
$$= \frac{b}{a+c} - \frac{a}{b+c}$$

$$\Rightarrow \frac{b^2 + bc - a^2 - ac}{(a+c)(b+c)}$$

$$\Rightarrow \frac{(b-a)(a+b+c)}{(a+c)(b+c)}$$
---(i)

RHS =
$$\frac{a}{a+b} - \frac{b}{a+c}$$

$$\Rightarrow \frac{ca+c^2-b^2-ab}{(a+b)(b+c)}$$

$$\Rightarrow \frac{(c-b)(a+b+c)}{(a+b)(b+c)}$$
---(ii)

and
$$a^2, b^2, c^2$$
 are in A.P

$$b^2 - a^2 = c^2 - b^2$$
 ---(iii)

Substituting $b^2 - a^2$ with $c^2 - b^2$ (i) = (ii)

$$\therefore \qquad \frac{a}{b+c}, \frac{b}{a+c}, \frac{c}{a+b} \text{ are in A.P}$$

Arithematic Progressions Ex 19.5 Q3(i) $a^2(b+c)$, $b^2(c+a)$, $c^2(a+b)$ are in A.P.

If
$$b^2(c+a) - a^2(b+c) = c^2(a+b) - b^2(a+c)$$

$$\Rightarrow b^2c + b^2a - a^2b - a^2c = c^2a + c^2b - b^2a - b^2c$$

Given,
$$b - a = c - b$$
 [a,b,c are in A.P]

$$c(b^2 - a^2) + ab(b - a) = a(c^2 - b^2) + bc(c - b)$$

$$(b - a)(ab + bc + ca) = (c - b)(ab + bc + ca)$$

Cancelling ab + bc + ca from both sides b - a = c - b2b = c + a which is true

Hence, $a^2(b+c)$, $(c+a)b^2$ and $c^2(a+b)$ are also in A.P.
