

Functions Ex 3.1 Q10

(i) We have,

$$f(x) = x^2$$

Range of $f(x) = R^+$ (set of all real numbers greater than or equal to zero) = $\{x \in R | x \ge 0\}$

(ii) We have,

$$g(x) = \sin x$$

Range of $g(x) = \{x \in R : -1 \le x \le 1\}$

(iii) We have,

$$h\left(x\right)=x^2+1$$

Range of $h(x) = \{x \in R : x \ge 1\}$

Functions Ex 3.1 Q11

(a) We have,

$$f_1 = \{(1,1), (2,11), (3,1), (4,15)\}$$

 f_1 is a function from X to Y.

(b) We have,

$$f_2 = \{(1,1), (2,7), (3,5)\}$$

 f_2 is not a function from X to Y because there is an element $4 \in X$ which is not associated to any element of Y.

(c) We have,

$$f_3 = \{(1,5), (2,9), (3,1), (4,5), (2,11)\}$$

 f_3 is not a function from X to Y because an element $2 \in X$ is associated to two elements 9 and 11 in Y.

Functions Ex 3.1 Q12

We have,

$$f(x)$$
 = highest prime factor of x .

$$12 = 3 \times 4,$$

$$13 = 13 \times 1$$

$$14 = 7 \times 2$$
,

$$15 = 5 \times 3$$
,

$$16 = 2 \times 8$$
,

$$17 = 17 \times 1$$

$$f = \{(12,3), (13,13), (14,7), (15,5), (16,2), (17,17)\}$$

$$\therefore \text{ Range}(f) = \{3,13,7,5,2,17\}$$

Functions Ex 3.1 Q13

We know that,

if
$$f: A \rightarrow 13$$

such that $y \in 3$. Then,

$$f^{-1}(y) = \{x \in A : f(x) = y\}$$
. In other words, $f^{-1}(y)$ is the set of pre-images of y .

Let $f^{-1}\{17\} = x$. Then, f(x) = 17

$$\Rightarrow x^2 + 1 = 17$$

$$\Rightarrow \qquad x^2 = 17 - 1 = 16$$

$$\Rightarrow$$
 $x = \pm 4$

Let $f^{-1}\{-3\} = x$. Then, f(x) = -3

$$\Rightarrow$$
 $x^2 + 1 = -3$

$$\Rightarrow \qquad x^2 = -3 - 1 = -4$$

$$\Rightarrow x = \sqrt{-4}$$

$$f^{-1}\left\{ -3\right\} =\theta$$

Functions Ex 3.1 Q14

We have,

$$A = \{p,q,r,s\}$$
 and $B = \{1,2,3\}$

(a) Now,

$$\mathcal{R}_1 = \left\{ \left(p, 1 \right), \; \left(q, 2 \right), \; \left(r, 1 \right), \; \left(s, 2 \right) \right\}$$

 R_1 is a function

(b) Now,

$$R_2 = \{(p, 1), (q, 1), (r, 1), (s, 1)\}$$

 R_2 is a function

(c) Now,

$$R_3 = \{(p, 1), (q, 2), (p, 2), (s, 3)\}$$

 R_3 is not a function because an element $p \in A$ is associated to two elements 1 and 2 in B.

(d) Now,

$$R_4 = \big\{ \big(p,2\big)\,,\ \, \big(q,3\big)\,,\ \, \big(r,2\big)\,,\ \, \big(s,2\big) \big\}$$

 R_4 is a function.
