

Exercise 12B

Q1.

Answer:

Clearly, $\frac{x}{y} = \frac{3}{9} = \frac{5}{15} = \frac{8}{24} = \frac{11}{33} = \frac{26}{78} = \frac{1}{3}$ (constant) Therefore, x and y are proportional.

(ii) Clearly,
$$\frac{x}{y} = \frac{2.5}{10} = \frac{4}{16} = \frac{7.5}{30} = \frac{10}{40} = \frac{1}{4}$$
, while $\frac{14}{42} = \frac{1}{3}$ i.e., $\frac{2.5}{10} = \frac{4}{16} = \frac{7.5}{30} = \frac{10}{40}$ is not equal to $\frac{14}{42}$. Therefore, x and y are not proportional.

(iii) Clearly,
$$\frac{x}{y} = \frac{5}{15} = \frac{7}{21} = \frac{9}{27} = \frac{25}{75} = \frac{1}{3}$$
, while $\frac{15}{60} = \frac{18}{72} = \frac{1}{4}$ i.e., $\frac{5}{15} = \frac{7}{21} = \frac{9}{27} = \frac{25}{75}$ is not equal to $\frac{15}{60}$ and $\frac{18}{72}$. Therefore, x and y are not proportional.

Q2.

Answer:

Since x and y are directly proportional, we have:

$$\frac{3}{72} = \frac{x_1}{120} = \frac{x_2}{192} = \frac{10}{y_1}$$
Now, $\frac{3}{72} = \frac{x_1}{120}$

$$\Rightarrow x_1 = \frac{120 \times 3}{72} = 5$$

And,
$$\frac{3}{72} = \frac{x_2}{192}$$

 $\Rightarrow x_2 = \frac{3 \times 192}{72} = 8$
And, $\frac{3}{72} = \frac{10}{y_1}$
 $\Rightarrow y_1 = \frac{72 \times 10}{3} = 240$
Therefore, $x_1 = 5$, $x_2 = 8$ and $y_1 = 240$

Q3.

Answer:

Let the required distance be x km. Then, we have

Let the required distance be x kin. Then, we have.		
Quantity of diesel (in litres)	34	20
Distance (in km)	510	X

Clearly, the less the quantity of diesel consumed, the less is the distance covered.

So, this is a case of direct proportion.

Now,
$$\frac{34}{510} = \frac{20}{x}$$

 $\Rightarrow \frac{1}{15} = \frac{20}{x}$
 $\Rightarrow x \times 1 = 20 \times 15 = 300$

Therefore, the required distance is 300 km.

Q4.

Answer:

Let the required charge be Rs x. Then, we have:

Distance (in km)	150	124
Taxi charges (in rupees	1275	\boldsymbol{x}

Clearly, the less the distance covered, the less will be the taxi charges.

So, this is a case of direct proportion.

Now,
$$\frac{150}{1275} = \frac{124}{x}$$

 $\Rightarrow \frac{2}{17} = \frac{124}{x}$
 $\Rightarrow (2 \times x) = (124 \times 17)$
 $\Rightarrow x = \frac{124 \times 17}{2}$
 $\Rightarrow x = 62 \times 17 = 1054$

Therefore, the required charge is Rs 1,054.

Q5.

Answer:

Let the required distance be x km. Then, we have:

$$\begin{array}{lll} 1~h=60~\text{min} \\ \text{i.e.}~,~5~h=5\times60=300~\text{min} \\ \\ \hline \text{Distance (in km)} & 16 & x \\ \hline \text{Time (in min)} & 25 & 300 \\ \end{array}$$

Clearly, the more the time taken, the more will be the distance covered.

So, this is a case of direct proportion.

Now,
$$\frac{16}{25} = \frac{x}{300}$$

 $\Rightarrow x = \left(\frac{16 \times 300}{25}\right)$
 $\Rightarrow x = 192$

Therefore, the required distance is 192 km.

Q6.

Answer:

Let the required number of dolls be x. Then, we have:

No of dolls	18	X
Cost of dolls (in rupees)	630	455

Clearly, the less the amount of money, the less will be the number of dolls bought. So, this is a case of direct proportion.

Now,
$$\frac{18}{630} = \frac{x}{455}$$

$$\Rightarrow \frac{1}{35} = \frac{x}{455}$$

$$\Rightarrow x = \frac{455}{35}$$

$$\Rightarrow x = 13$$

Therefore, 13 dolls can be bought for Rs 455.

Q7.

Answer:

Let the required weight of sugar be x kg. Then, we have:

Weight of sugar (in kg)	9	X
Cost of sugar (in rupees)	166.50	259

Clearly, more quantity of sugar can be bought for more amount of money. So, this is a case of direct proportion.

Now,
$$\frac{9}{166.50} = \frac{x}{259}$$

 $\Rightarrow x = \frac{9 \times 259}{166.50}$
 $\Rightarrow x = \frac{9 \times 259 \times 100}{16650}$
 $\Rightarrow x = 14$

Therefore, 14 kg of sugar can be bought for Rs 259.

Q8.

Answer:

Let the length of cloth be x m. Then, we have:

Length of cloth (in metres)	15	X
Cost of cloth (in rupees)	981	1308

Clearly, more length of cloth can be bought by more amount of money. So, this is a case of direct proportion.

Now,
$$\frac{15}{981} = \frac{x}{1308}$$

 $\Rightarrow x = \frac{15 \times 1308}{981}$
 $\Rightarrow x = 20$

Therefore, 20 m of cloth can be bought for Rs 1,308.

Q9.

Answer:

Let x m be the length of the model of the ship. Then, we have:

$$1 m = 100 cm$$

Therefore, $15 m = 1500 cm$
 $35 m = 3500 cm$
