

Quadratic Equations Ex 8.5 Q1

Answer:

We have to find the discriminant of the following quadratic equations

(i) We have been given, $2x^2 - 5x + 3 = 0$

Now we also know that for an equation $ax^2 + bx + c = 0$, the discriminant is given by the following equation:

$$D = b^2 - 4ac$$

Now, according to the equation given to us, we have, a = 2, b = -5 and c = 3.

Therefore, the discriminant is given as,

$$D = (-5)^{2} - 4(2)(3)$$

$$= 25 - 24$$

$$= 1$$

Therefore, the discriminant of the equation is []

(ii) We have been given, $x^2 + 2x + 4 = 0$

Now we also know that for an equation $ax^2 + bx + c = 0$, the discriminant is given by the following equation:

$$D = b^2 - 4ac$$

Now, according to the equation given to us, we have, a = 1, b = 2 and c = 4.

Therefore, the discriminant is given as,

$$D = (2)^{2} - 4(1)(4)$$

$$= 4 - 16$$

$$= -12$$

Therefore, the discriminant of the equation is -12

(iii) We have been given, (x-1)(2x-1)=0

Now, simplify the equation to be represented in the quadratic form, so we have

$$2x^{2} - x - 2x + 1 = 0$$
$$2x^{2} - 3x + 1 = 0$$

Now we also know that for an equation $ax^2 + bx + c = 0$, the discriminant is given by the following equation:

$$D = b^2 - 4ac$$

Now, according to the equation given to us, we have, a = 2, b = -3 and c = 1.

Therefore, the discriminant is given as,

$$D = (-3)^{2} - 4(2)(1)$$

$$= 9 - 8$$

$$= 1$$

Therefore, the discriminant of the equation is 1

(iv) We have been given, $x^2 - 2x + k = 0$

Now we also know that for an equation $ax^2 + bx + c = 0$, the discriminant is given by the following equation:

$$D = b^2 - 4ac$$

Now, according to the equation given to us, we have, a = 1, b = -2 and c = k

Therefore, the discriminant is given as,

$$D = (-2)^2 - 4(1)(k)$$

Therefore, the discriminant of the equation is 4-4k

(v) We have been given, $\sqrt{3}x^2 + 2\sqrt{2}x - 2\sqrt{3} = 0$

Now we also know that for an equation $ax^2 + bx + c = 0$, the discriminant is given by the following equation:

$$D = b^2 - 4ac$$

Now, according to the equation given to us, we have, $a=\sqrt{3}$. $b=2\sqrt{2}$ and $c=-2\sqrt{3}$

Therefore, the discriminant is given as,

$$D = (2\sqrt{2})^2 - 4(\sqrt{3})(-2\sqrt{3})$$
$$= 8 + 24$$
$$= 32$$

Therefore, the discriminant of the equation is 32

(vi) We have been given, $x^2 - x + 1 = 0$

Now we also know that for an equation $ax^2 + bx + c = 0$, the discriminant is given by the following equation:

$$D = b^2 - 4ac$$

Now, according to the equation given to us, we have, a = 1, b = -1 and c = 1.

Therefore, the discriminant is given as,

$$D = (-1)^{2} - 4(1)(1)$$

$$= 1 - 4$$

$$= -3$$

Therefore, the discriminant of the equation is $\boxed{-3}$
