

Exercise 9B

## Question 7:

Lets ABCD be the given parallelogram.

If ∠A is smallest angle, then the greater angle

$$\Rightarrow$$
  $\angle B = 2\angle A - 30^{\circ}$ 

In a parallelogram, the opposite angles are equal

$$\Rightarrow$$
  $\angle A = \angle C$  and  $\angle B = \angle D = 2\angle A - 30^{\circ}$ 

The sum of all the four angles of a parallelogram is 360°.

⇒ 
$$\angle A + \angle B + \angle C + \angle D = 360^{\circ}$$
  
⇒  $\angle A + (2\angle A - 30^{\circ}) + \angle A + (2\angle A - 30^{\circ}) = 360^{\circ}$   
⇒  $\angle A + 2\angle A - 30^{\circ} + \angle A + 2\angle A - 30^{\circ} = 360^{\circ}$   
⇒  $6\angle A - 60^{\circ} = 360^{\circ}$   
⇒  $6\angle A = 360^{\circ} + 60^{\circ} = 420^{\circ}$ 

$$A = \frac{420^{\circ}}{6} = 70^{\circ}$$

$$\therefore \angle A = 70^{\circ} \Rightarrow \angle C = 70^{\circ}$$

$$\angle B = (2\angle A - 30^{\circ}) = (2 \times 70^{\circ} - 30^{\circ}) = 110^{\circ}$$

$$\angle D = \angle B = 110^{\circ}$$

$$\therefore$$
  $\angle A = \angle C = 70^{\circ}$  and  $\angle B = \angle D = 110^{\circ}$ .

## Question 8:

Perimeter of a parrallelogram ABCD

[:: ABCD is a parrallelogram and its opposite sides are equal i.e. AB = CD and BC = DA]

$$30 = 19 + 2BC$$

[Perimeter = 30 cm(given)]

$$\Rightarrow 2BC = 30 - 19 = 11$$

$$\Rightarrow BC = \frac{11}{2} = 5.5 \text{ cm}$$

: AB = 9.5cm, BC = 5.5cm, CD = 9.5cm, DA = 5.5cm.
