

Exercise 9B

Q12.

Answer:

(b) decrease by 1 %

Let x be the number.

A 10% increase will give a new number, $\frac{110}{100} x = \frac{11}{10} x$ The number is then reduced by 10%.

The new number will be $\frac{90}{100} \left(\frac{11}{10} \, \mathbf{x} \right) = \frac{990}{1000} \, \boldsymbol{x} = \frac{99}{100} \, \boldsymbol{x}$

Difference = $\mathbf{x} - \frac{99}{100} \mathbf{x} = \frac{1}{100} \mathbf{x}$

Percentage of decrease = $\frac{1}{100} x \times \frac{1}{x} \times 100 = 1\%$

Q13.

Answer:

(a)
$$18\frac{3}{4}\%$$

$$4 h 30 min = (4 \times 60 \times 60) + (30 \times 60)$$

$$= 16200 sec$$

$$24 h = (24 \times 60 \times 60)$$

$$= 86400 sec$$
Now, $\left(\frac{16200}{86400} \times 100\right)\% = 18\frac{3}{4}\%$

Q14.

Answer:

(c) 1200

Let x be the total number of examinees. Percentage of the examinees passed = 65% Percentage of the examinees failed = 35% Number of the examinees failed = (35% of x) = $\left(x \times \frac{35}{100}\right)$

Now,
$$\frac{35x}{100} = 420$$

$$\Rightarrow x = \left(420 \times \frac{100}{35}\right)$$

$$\Rightarrow x = 1200$$

Q15.

Answer:

(a) 50

Let x be the required number. Then, we have:

$$20\% \text{ of } x + 40 = x$$
$$\Rightarrow \left(x \times \frac{20}{100}\right) + 40 = x$$

$$\Rightarrow \frac{20x}{100} + 40 = x$$

$$\Rightarrow \left(\frac{20x}{100} - x\right) = -40$$

$$\Rightarrow \frac{-80\mathbf{z}}{100} = -40$$

$$\Rightarrow \boldsymbol{x} = \left(40 \times \frac{100}{80}\right)$$

$$\Rightarrow x = 50$$

Q16.

Answer:

(c) 120

Let the required number be x. Then, we have:

$$\mathbf{x} - \left(27 \frac{1}{2} \% \text{ of } \mathbf{x}\right) = 87$$

$$\Rightarrow \mathbf{x} - \left(\frac{55}{2} \% \text{ of } \mathbf{x}\right) = 87$$

$$\Rightarrow \mathbf{x} - \left(\mathbf{x} \times \frac{55}{2} \times \frac{1}{100}\right) = 87$$

$$\Rightarrow \mathbf{x} - \frac{11\mathbf{x}}{40} = 87$$

$$\Rightarrow \frac{29\mathbf{x}}{40} = 87$$

$$\Rightarrow \mathbf{x} = \left(87 \times \frac{40}{29}\right)$$

$$\Rightarrow \mathbf{x} = 120$$

Q17.

Answer:

(c) 0.25%

Required percentage =
$$\left(\frac{0.05}{20} \times 100\right)\% = 0.25\%$$

Q18.

Answer:

(d) 300%

Required percentage =
$$\left(\frac{1206}{3} \times \frac{1}{134} \times 100\right)\% = 300\%$$

Q19.

Answer:

(a) x

Let the required number be z. Then, we have:

$$x\% \text{ of } y = y\% \text{ of } z$$

$$\Rightarrow \left(y \times \frac{x}{100}\right) = \left(z \times \frac{y}{100}\right)$$

$$\Rightarrow \frac{yx}{100} = \frac{zy}{100}$$

$$\Rightarrow z = \left(\frac{yx}{100} \times \frac{100}{y}\right)$$

$$\Rightarrow z = x$$

Q20.

Answer:

(a) \times Required percentage = $\left(\frac{1}{35} \times \frac{7}{2} \times 100\right)\% = 10\%$ ******* END ********
