

#### Exercise 9A

Q1

# Answer:

Cost of 15 oranges = Rs 110

Cost of 1 orange = Rs 
$$\frac{110}{15}$$
   
  $\therefore$  Cost of 39 oranges = Rs  $\frac{110}{15} \times 39$  = Rs 286

Q2

### Answer:

Amount of sugar bought for Rs 260 = 8 kg 
Amount of sugar bought for Re 1 =  $\frac{8}{260}$  kg 
Now, amount of sugar bought for Rs 877.50 =  $\frac{8}{260}$  × 877.50 kg = 27 kg

: 27 kg of sugar can be bought for Rs 877.50.

# Read More about Ratio and Proportion

Q3

# Answer:

Length of the silk purchased for Rs 6290 = 37 m 
Length of the silk purchased for Re 1=  $\frac{37}{6290}$  m 
Now, length of the silk purchased for Rs 4,420 =  $\frac{37}{6290}$  × 4420 m = 26 m  $\therefore$  26 m of silk can be purchased for Rs 4,420.

Q4

# Answer:

Number of days for which a worker is paid Rs 1,110 = 6

Number of days for which a worker is paid Re 1 =  $\frac{6}{1110}$  days Now, number of days for which a worker is paid Rs  $4625 = \frac{6}{1110} \times 4625$  days = 25 days  $\therefore$  The worker worked 25 days in a month.

Q5

# Answer:

Distance covered by the car with 42 L of petrol =  $\frac{357}{42}$  km [less petrol, less distance]

Now, distance covered by the car with 12 L of petrol =  $\frac{357}{42}$  × 12 = 102 km [more petrol, more distance]

#### Q6

#### Answer:

Cost of travelling 900 km by train = Rs 2520

Cost of travelling 1 km by train = Rs  $\frac{2520}{900}$ Now, cost of travelling 360 km by train =Rs  $\frac{2520}{900} \times 360$  = Rs 1008  $\therefore$  The train fare for a journey of distance 360 km is Rs 1,008.

### Q7

#### Answer:

Time taken to cover a distance of 51 km = 45 min

Time taken to cover a distance of 1 km =  $\frac{45}{51}$  min

Time taken to cover distance of 221 km =  $\frac{45}{51} \times 221$  min = 195 min = 3 h 15 min

:. The train will take 3 h 15 min to cover a distance of 221 km.

#### Q8

#### Answer:

#### Q9

#### Answer:

Number of paper sheets that weighs 162 g = 6 
Number of paper sheets that weighs 1 g =  $\frac{6}{162}$  
[less weight, less sheets] 
.. Number of paper sheets that weighs 13.5 kg =  $\frac{6}{162} \times 13.5 \times 1000$  = 500 
[more weight, more sheets]

#### Q10

## Answer:

Number of cartons needed to pack 1152 soap bars = 8

Number of cartons needed to pack 1 soap bar =  $\frac{8}{1152}$  [less number of soaps, less number of cartons needed]

Now, number of cartons needed to pack 3888 soap bars =  $\frac{8}{1152} \times 3888$  = 27 [more soaps, more carton needed]

: 27 cartons are needed to pack 3888 soap bars.

#### Q11

#### Answer:

Number of cardboards in a pile of thickness 44 mm = 16 
Number of cardboards in a pile of thickness 1 mm =  $\frac{16}{44}$  
Number of cardboards in a pile of thickness 71.5 cm =  $\frac{16}{44}$  × 71.5 × 10 = 260 
[1 cm=10 mm]

 $\uplambda$  260 cardboards will be there in a pile of thickness 71.5 cm.

#### Q12

#### Answer:

Height of the flagstaff that casts a shadow of length 8.2 m = 7 m 
Height of the building that casts a shadow of length 1 m =  $\frac{7}{8.2}$  m 
Height of the building that casts a shadow of length 20.5 m =  $\frac{7}{8.2}$  × 20.5 m = 17.5 m  $\therefore$  The height of the required building is 17.5 m.

#### Q13

#### Answer:

Number of men employed to built the 16.25 m long wall = 15 Number of men required to built a 1 m long wall =  $\frac{15}{16.25}$ 

Number of men that should be employed to built a 26 m long wall =  $\frac{15}{16.25}\times26$  = 24  $\div$  24 men should be employed to build a wall of length 26 m in a day.

#### Q14

#### Answer:

Number of patients who can consume 1350 L of milk = 60 Number of patients who can consume 1 L of milk =  $\frac{60}{1350}$  Now, number of patients who can consume 1710 L of milk =  $\frac{60}{1350} \times 1710 = 76$ 

Hence, 76 patients can be accommodated in the hospital if the monthly ration of milk is raised to 1710 L.

#### Q15

#### Answer:

Weight that would produce an extension of 2.8 cm = 150 g

Weight that would produce an extension of 1 cm =  $\frac{150}{2.8}$  g

Weight that would produce an extension of 19.6 cm =  $\frac{150}{2.8} \times 19.6 = 1050$  g = 1 kg 50 g [1 kg = 1000 g]

 $\therefore$  A weight of 1 kg 50 g would produce an extension of 19.6 cm.
