

Exercise 4A

Question 5:

 Δ ABC and Δ PQR are similar triangles, therefore corresponding sides of both the triangles are proportional.

So,
$$\frac{\text{Perimeter of } \Delta \text{ABC}}{\text{Perimeter of } \Delta \text{PQR}} = \frac{\text{AB}}{\text{PQ}}$$
Let, $\Delta \text{AB} = \times \text{cm}$
Then, $\frac{\times}{12} = \frac{32}{24}$

$$\times = \frac{32 \times 12}{24} = 16 \text{ cm}$$

Hence, AB = 16 cm

Question 6:

 ΔABC and ΔDEF are two similar triangles, therefore corresponding sides of both the triangles are proportional.

$$\frac{\text{Perimeter of } \Delta ABC}{\text{Perimeter of } \Delta DEF} = \frac{BC}{EF}$$

Let perimeter of $\triangle ABC = x cm$

$$\frac{x}{25} = \frac{9.1}{6.5}$$

$$x = \frac{9.1 \times 25}{6.5} = 35 \text{ cm}$$

Hence, perimeter of \triangle ABC = 35 cm

Question 7:

We know that CD \parallel AB in trap ABCD and its diagonals intersect at O. Since the diagonals of a trapezium divides each other proportionally therefore, we have

$$\frac{AO}{OC} = \frac{BO}{OD}$$
 (by thales theorem)
$$\Rightarrow \frac{5x - 7}{2x + 1} = \frac{7x + 1}{7x - 5}$$

$$\Rightarrow (5x - 7)(7x - 5) = (7x + 1)(2x + 1)$$

$$\Rightarrow 35x^2 - 25x - 49x + 35 = 14x^2 + 7x + 2x + 1$$

$$\Rightarrow 35x^2 - 14x^2 - 25x - 49x - 7x - 2x + 35 - 1 = 0$$

$$\Rightarrow 21x^2 - 83x + 34 = 0$$

$$\therefore x = \frac{83 \pm \sqrt{(83)^2 - 4 \times 21 \times 34}}{21 \times 2}$$

$$= \frac{83 \pm \sqrt{4033}}{42}$$

$$= \frac{83 \pm 63.51}{42}$$

$$= \frac{146.51}{42} \text{ or } \frac{19.49}{42}$$

$$= 3.49 \text{ or } 0.46$$

$$\Rightarrow x = 0.46 \text{ or } 3.49,$$

But $x \neq 0.46$ as all sides should be positive.

x = 3.49 cm

********* END *******
