

Squares and Square Roots Ex 3.1 Q1

2	7688
2	3844
2	1922
31	961
31	31
	1

Grouping 7688 into pairs of equal factors:

7688 = (2 x 2) x (31 x 31) x 2

Here, 2 does not occur in pairs. To be a perfect square, every prime factor has to be in pairs. Hence, the smallest number by which 7688 must be multiplied is 2.

Answer:

- (i) $484 = 22^2$
- (ii) $625 = 25^2$
- (iii) $576 = 24^2$
- (iv) Perfect squares closest to 941 are 900 (30²) and 961 (31²). Since 30 and 31 are consecutive numbers, there are no perfect squares between 900 and 961. Hence, 941 is not a perfect square.
- $(v) 961 = 31^2$
- (vi) $2500 = 50^2$

Hence, all numbers except that in (iv), i.e. 941, are perfect squares.

Squares and Square Roots Ex 3.1 Q2

Answer:

In each problem, factorise the number into its prime factors.

(i) $1156 = 2 \times 2 \times 17 \times 17$

Grouping the factors into pairs of equal factors, we obtain:

1156 = (2 x 2) x (17 x 17)

No factors are left over. Hence, 1156 is a perfect square. Moreover, by grouping 1156 into equal factors:

1156 = (2 x 17) x (2 x 17)

 $=(2 \times 17)^2$

Hence, 1156 is the square of 34, which is equal to 2 x 17.

(ii) 2025 = 3 x 3 x 3 x 3 x 5 x 5

Grouping the factors into pairs of equal factors, we obtain:

2025 = (3 x 3) x (3 x 3) x (5 x 5)

No factors are left over. Hence, 2025 is a perfect square. Moreover, by grouping 2025 into equal factors:

2025 = (3 x 3 x 5) x (3 x 3 x 5)

 $= (3 \times 3 \times 5)^2$

Hence, 2025 is the square of 45, which is equal to 3 x 3 x 5.

```
(iii) 14641 = 11 x 11 x 11 x 11
```

Grouping the factors into pairs of equal factors, we obtain:

No factors are left over. Hence, 14641 is a perfect square. The above expression is already grouped into equal factors:

$$14641 = (11 \times 11) \times (11 \times 11)$$
$$= (11 \times 11)^{2}$$

Hence, 14641 is the square of 121, which is equal to 11 x 11.

(iv) 4761 = 3 x 3 x 23 x 23

Grouping the factors into pairs of equal factors, we obtain:

$$4761 = (3 \times 3) \times (23 \times 23)$$

No factors are left over. Hence, 4761 is a perfect square. The above expression is already grouped into equal factors:

$$=(3 \times 23)^2$$

Hence, 4761 is the square of 69, which is equal to 3 x 23.
